Education

Maharaja Agrasen Institute of Technology, B.Tech in IT (8.9 CGPA)

Experience

Software Engineer(Backend/AI), Xane AI – Gurugram, India Jan 2026 – Present

- Built an **AI agent on Mastra** that acts as an assistant for automobiles and appliances, handling everything from **information retrieval** to **service booking** and **warranty claims**.
- Developed full **traceability, logging, and explainability** for the agent, using **evals** to track its performance and drive continuous improvement.
- Built a **document OCR pipeline** ingesting **100k+ pages** via **MinerU VLM**, powering **RAG over Qdrant** with **RRF hybrid retrieval (sparse + dense)**.
- Designed **system architecture, database schemas, APIs, and AWS deployment plans** for a product serving **3.1M+ users**.

Software Engineer, Roger (YC S24) – Remote (Freelance/Contract) May 2026 – June 2026

- Built an **AI agent** that takes a brand's website URL, scrapes its site and online presence, and learns the brand's identity, tone, and visual style to generate on-brand posts, creatives, and **UGC-style ads**.
- Architected the system and built the **URL-to-live-ad** loop end-to-end using **GPT Image 2**, **Seedance 2** live-avatar video, and **Meta Ads APIs**, with **tool orchestration**, context and memory management, and **job queueing and retries**.

Software Engineer, Otomashen (E-solutions) – Noida, India Feb 2025 – Jan 2026

- Built and scaled a high-throughput **EDI/X12 processing engine** handling **20k+ claim files** and millions of encrypted denial records, driving a **166% revenue increase**.
- Optimized **Node.js/TypeScript** backend services reducing API latency from **10s to <1s**
- Engineered a **real-time dispatch system** for proximity-based doctor matching, request lifecycle (accept/decline), and instant notifications.
- Delivered **4 production-grade client systems**, leading one end-to-end as the **Lead Developer**, owning architecture, implementation, and deployment.

Founding Product Engineer, Stealth Startup (YC-backed) – Remote Aug 2024 – Jan 2025

- Owned the product end-to-end as the **founding product engineer**, including **system architecture, database schema, frontend, backend APIs, and deployment**.
- Built an **AI work-management platform** on **LangGraph, Gemini, Node.js, BullMQ, Redis, and PostgreSQL**, handling **100k–200k requests per month**.

Projects

Amigmi Github | Live

- Open-source **CLI** parsing **Claude Code, Codex, and OpenCode** logs to rank developers by AI token usage.

Whooper Github | Live

- Open-source **API caching proxy** that caches backend responses and auto-invalidates them via user-defined rules.

InsightPlus Github | Live

- Self-hostable analytics engine on **NestJS, Redis Streams, and ClickHouse**, ingesting **10k+ events/sec**.

Redis-inside Github

- Open-source **CLI** bringing **Redis Insights** to the terminal to browse keys, inspect data, and monitor memory.

Technical Skills

Languages: Javascript, Typescript, Golang(Go)
Frameworks: Next.js, NestJS, React.js, Express.js, Langchain, Deep agents
Runtime: Bun, Node.js
DevOps/Infra: AWS, Azure, Vercel, Git, Docker, Github Actions
Databases: PostgreSQL, MySQL, Redis, MongoDB, Vector db(Qdrant, Pinecone), ClickHouse
