Education

Maharaja Agrasen Institute of Technology, B.Tech in IT (8.9 CGPA)

Dec 2021 – Feb 2025

Experience

Software Engineer(Backend/AI), Xane AI – Gurugram, India

Jan 2026 – Present

- Designed and implemented **end-to-end system architectures, database schemas, and REST APIs**, along with technical documentation and **AWS deployment plans** for the core product and its microservices serving **3.1M+ total users**.
- Built a **multi-tool search agent** using **DeepAgents (LangChain)** with persistent memory via **Mem0**, backed by hybrid retrieval over **Qdrant** using **BGE-M3 embeddings** and **Reciprocal Rank Fusion (RRF)**.
- Engineered a **document ingestion pipeline** handling **OCR (MinerU)**, Markdown-aware chunking, and vector embedding, with **image contextualisation** for multimodal retrieval.
- Explored open-source **models, tools, and frameworks**, and built internal tools and POCs to validate their fit into existing workflows, including **RAGAS-based evaluation** of RAG accuracy.

Software Engineer, Roger (YC S24) – Remote (Freelance/Contract)

May 2026 – June 2026

- Built an **AI agent** that takes a brand's website URL, scrapes its site and online presence, and learns the brand's identity, tone, and visual style to generate on-brand posts, creatives, and **UGC-style ads**.
- Built the publishing loop end-to-end by **GPT Image 2** for ad creative generation, **Seedance 2** for live-avatar video, **Meta Ads APIs** for direct campaign deployment converting it to a **URL to live ad**, fully automated.
- Architected the system, web crawling, **tool orchestration** with context and memory management, job **queuing and retries**, and real-time status tracking for video generation.

Software Engineer, Otomashen (E-solutions) – Noida, India

Feb 2025 – Jan 2026

- Built and scaled a high-throughput **EDI/X12 processing engine** handling **20k+ claim files** and millions of encrypted denial records, driving a **166% revenue increase**.
- Optimized **Node.js/TypeScript** backend services through query tuning, indexing, and caching, reducing API latency from **10s to <1s**, and engineered a **real-time dispatch system** for doctor matching and notifications.
- Delivered **4 production-grade client systems**, leading one end-to-end as the **Lead Developer**, owning architecture, implementation, and deployment.

Projects

Amigmi [Github](#) | [Live](#)

- Built an open-source **CLI tool** that locally parses **JSONL** logs from **Claude Code, Codex, and OpenCode** to track AI token usage and rank developers on a **global leaderboard**.

Whooper [Github](#) | [Live](#)

- Built an open-source **API caching proxy** that sits between clients and backend services, caching responses and automatically invalidating them using user-defined rules.

InsightPlus [Github](#) | [Live](#)

- Built a fully open-source, self-hostable analytics engine using **NestJS, TypeScript, Redis Streams, PostgreSQL, and ClickHouse**, ingesting **tens of thousands of events/sec** while supporting real-time metrics including **MAU, DAU, retention, funnels, and custom events**.

Redis-inside [Github](#)

- Built an open-source **CLI tool** that brings **Redis Insights** to the terminal, allowing developers to browse keys, inspect data, monitor memory usage, and manage Redis without leaving the CLI.

Technical Skills

Languages: Javascript, Typescript, Golang(Go)

Frameworks: Next.js, NestJS, React.js, Express.js, Langchain, Deep agents

Runtime: Bun, Node.js

DevOps/Infra: AWS, Azure, Vercel, Git, Docker, Github Actions

Databases: PostgreSQL, MySQL, Redis, MongoDB, Vector db(Qdrant, Pinecone), ClickHouse
